info@vitecolearning.eu

VITECO is a provider of e-learning technologies. Since 2004, it develops user-friendly web platforms for Distance Learning.

SERVICES

- **Design of Distance Learning Systems**

tailor-made e-learning solutions: we help you customising the solution that best suits your needs.

- **Content development**

Implementation of online courses, simulations, educational games and conversion of video-courses in SCORM format.

- **LMS integration hosting and administration**

Integrations of the e-learning platform with company management systems.

SOLUTIONS

Solutions for training centres

Among **VITECO** clients there are several training centres of all types and sizes. It takes part in projects, even at international level, aiming at entrepreneurs, recently graduate students, trainees and unemployed people. We believe in the users' emotional response and to reach it we use different technologies:

- Webinars
- Videoconference meetings
- Interactive contents
- Streaming video courses

These methodologies allow us to create highly-engaging learning experiences.

Solutions for CME Providers

VITECO, complying with the quality requirements established by the Ministry of Health for Distance Learning accreditation, supports Continuing Medical Education – CME Providers in the choice of educational and technological strategies in order to achieve effective e-learning experiences.

The following services are aimed to Providers:

- Planning of Distance Learning training interventions
- Creation of courses through e-learning methodology
- Development and customisation of a LMS - Learning Management System (e-learning platform)

SOLUTIONS

Solutions for Public Administrations

Internet and Information Technology represent a new educational environment allowing to switch between a traditional type of learning tied to time restrictions and fixed places (school or University) and a new type of learning that is available at every moment and in every place. In schools and Universities, the blended teaching solutions are becoming very common: the traditional class lesson is integrated and supported by the online lesson. **VITECO** e-learning solutions allow to realize a dynamic teaching complying with the technical accessibility canons (under the Italian Law, L. Stanca n.4 09/01/2004).

Solutions for Companies

Nowadays, one of the biggest challenge for companies willing to enhance their human resources is to empower training as part of everyday life and of daily work. **VITECO** offers the right solutions to integrate traditional and online training, through several options conceived either to help SMEs and also to satisfy big organisations with a high budget at disposal.

PRODUCTS

e-Logos[®] Cloud is a web based learning platform that, thanks to the total integrated e-commerce area, allows to sell and provide online teaching contents. Easy to use, it is the ideal tool for all those training centres that want to take advantage of Distance Learning and freely customise their web page promoting the courses compared to the rigid rules of open source.

e-Logos[®] 3.0 is the most suitable solution for those training centres requiring a fully complete platform with each tool. It is developed to answer the most demanding training centres that desire the integration with e-commerce to sell online their courses; need of very detailed reports; aim at the interaction through virtual classrooms; use interactive quizzes and video-lessons, and much more.

MedicalFAD is the ideal tool for the online courses of the Continuing Medical Education (CME) training centres. It eases the relations with the national Agency for regional health services (Agenas), because with a simple click it is possible to extract the XML track.

PRODOTTI

JO Docet Easy is the ready-to-use e-learning platform for those that have renounced to have their own platform. It is the ideal tool for companies that want to take advantage of Distance Learning for short periods or even to deliver a single course.

JO Docet Manager is the web solution to simplify the management of the training courses, because it allows to map the master data and each activity in a very simple way.
